

## 6. CONCLUSIONS

This Construction Plan Report has been completed to assist DWP in fulfilling regulatory obligations for the development of the Dufferin Wind Power Project. This report is consistent with *Ontario Regulation 359/09* (as amended January 1, 2011) for a Class 4 Wind Farm facility, as set out by the *Green Energy Act, 2009*.

Sufficient fieldwork and data collection was performed over the past five years to assist in the determination of potential effects on the environmental and social features that may be affected by this project during the construction phase. Various mitigation measures to manage these effects have been identified.

Significant adverse effects on the natural and social environment have been avoided through careful site selection, facility layout planning and strict adherence to all regulatory requirements. All wind turbines, access roads and ancillary facilities have been sited with public and landowner consultation to minimize impacts on current land uses.

Prior to construction, the Proponent will prepare an Environmental Effects Monitoring Plan. The plan will be included in the *Design and Operations Report*.

**The overall conclusion of this *Construction Plan Report* is that this project can be constructed without any significant adverse residual effects to the natural or social environment.**
